

Providing Global Services

Technology staff support Bible translators in the most remote and difficult places on earth—supplying the tools they need to complete the task.

These tools include hardware that enables off-the-grid power and Internet connections, plus software that analyzes grammar and supports non-Roman font development—and more.

Technology

MAKING BIBLE
TRANSLATION

POSSIBLE

in the MOST
REMOTE PLACES!

Want to Learn More? Attend a Check-IT-Out Conference!

Discover firsthand how technology is key in reaching Bibleless people with the Word of God. At one of our two-day conferences—fall and spring—or our week-long summer conference for the entire family, you will have an opportunity to explore the tools that speed Bible translation and talk with experienced IT staff who are working effectively in a variety of areas.

If you have a passion to use your IT knowledge and experience to serve the Lord, Check-IT-Out is a good place to start!

IT Professionals Around the Globe

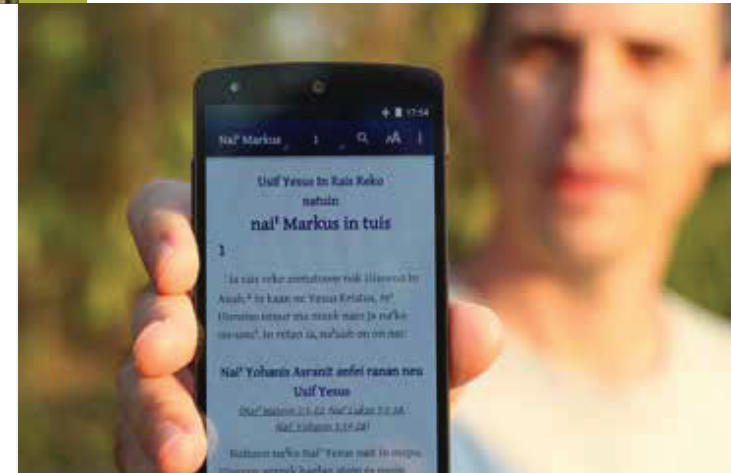

IT professionals serve in over 70 countries, from one-person operations handling all aspects of technology to major US centers with specialized positions and the latest technologies.

International help desks use powerful, secure, remote software to provide support for global staff.

Field Systems researches the best tools to provide solar and battery power, as well as satellite and communication systems specific to an area's need.

Mobile apps enable translators to record and speed distribution of even small portions of Scripture.

Nearly 700 million people still have little-to-no access to Scripture in the language they know best—their heart language!
